

## COVER LETTER

Kediri, 28 November 2020

Dear Chief Editor of Zoo Indonesia,

We wish to submit an original research article entitled “Distribution, Characteristic and Behavior of *Rhinocypha anisoptera* Selys, 1879 (odonata: chlorocyphidae) in East Java” for consideration by Zoo Indonesia Jurnal Fauna Tropika.

We confirm that this work is original and has not been published elsewhere, nor is it currently under consideration for publication elsewhere.

In this paper, we compile the record of *Rhinocypha anisoptera* distribution, characteristic and behaviour in East Java. This is significant because the recent data on that of each is currently outdate. This research article discovers the data that of which can be used primarily as the conservation bases about this species. We believe that this manuscript is appropriate for publication by Zoo Indonesia Jurnal Fauna Tropika because it highlights one of Indonesian damselfly species which brought several research interests about behaviour, ecology also morphology.

We have no conflicts of interest to disclose.

Please address all correspondence concerning this manuscript to me at [abdillah.kutrik@gmail.com](mailto:abdillah.kutrik@gmail.com).

Thank you for your consideration of this manuscript.

Sincerely,

Muhammad Muhibbuddin Abdillah, S.Si
